Game Design - The Basics

An introduction on what to add to the game

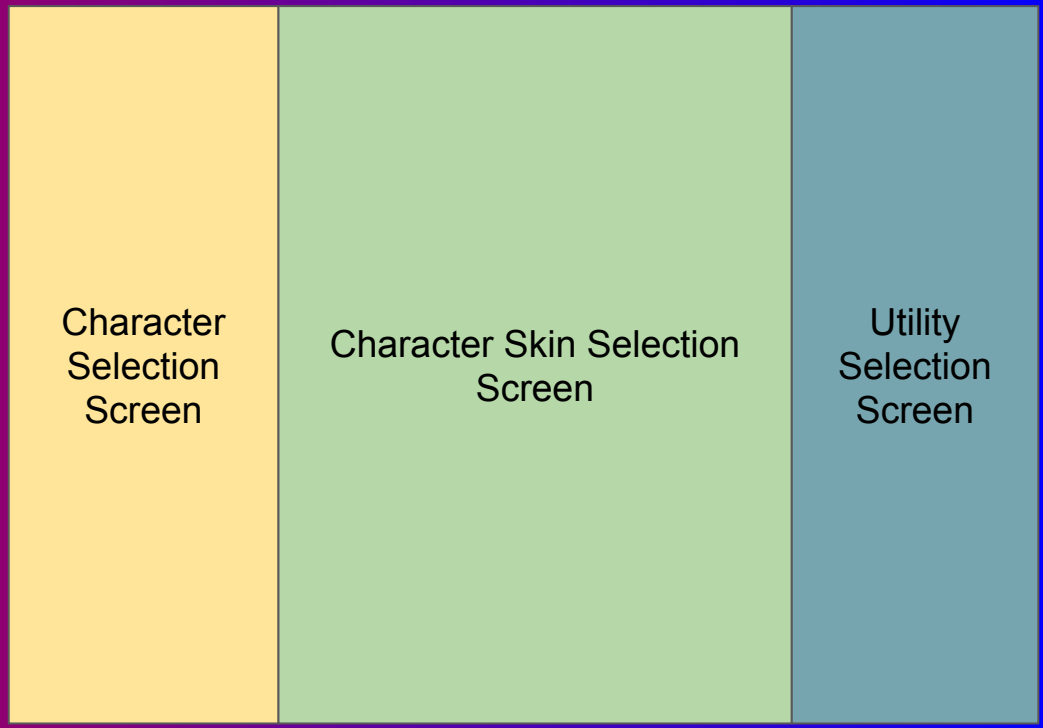

Lobby Design

The game will begin with you seeing a screen with two character options to start with. Their designs will be chosen later. There will be a character shop (1), player card shop (3), character skin shop (2), four elevators, and an area where you appear when starting the game.

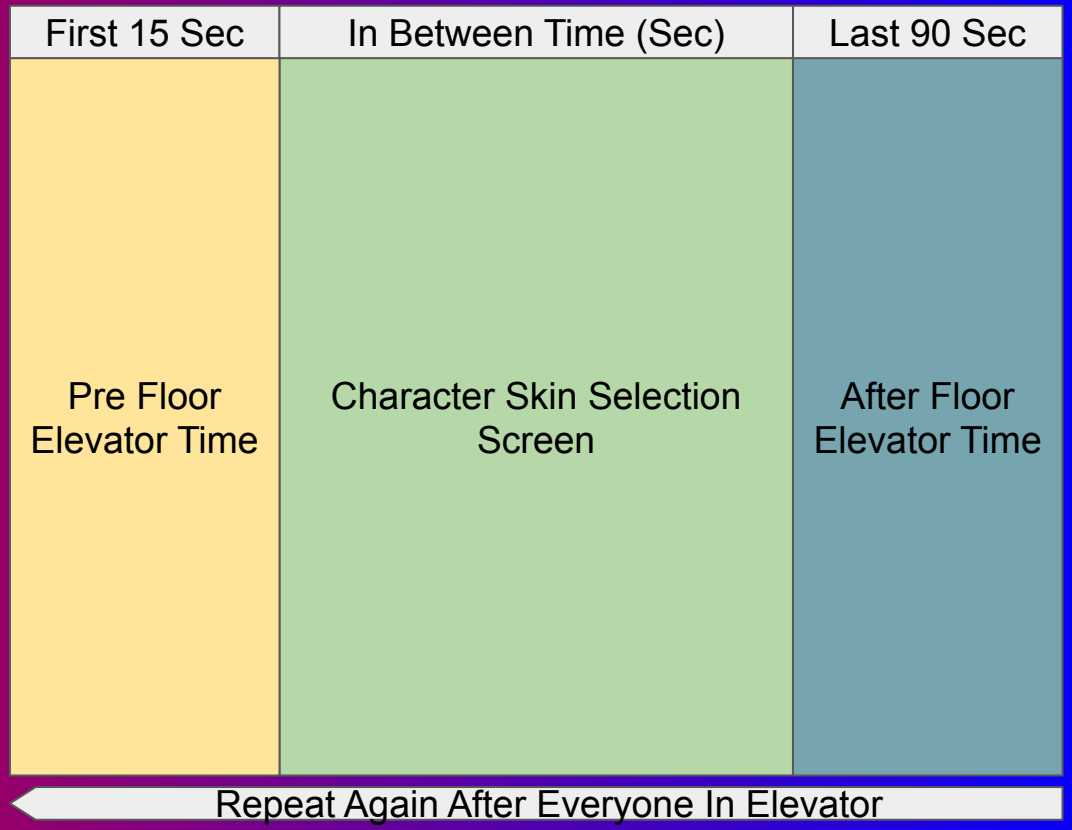

Actual Game 1

After entering the elevator, a quick countdown will start. After it ends, you will be sent to the actual game. UI will appear, letting you select your character, skin, and utilities (talked about later). After everyone is ready or the other timer ends, you will be taken to an elevator with every other player with you.

Actual Game 2

In the elevator, you will stay for about 15 seconds. After that ends, the doors will open to a random map chosen with RNG. There will be many map options, which will also be explained later. After finishing a floor, explained later, everyone has 90 seconds to run back to the elevator they originally came from, and die if they don't.

Map Options

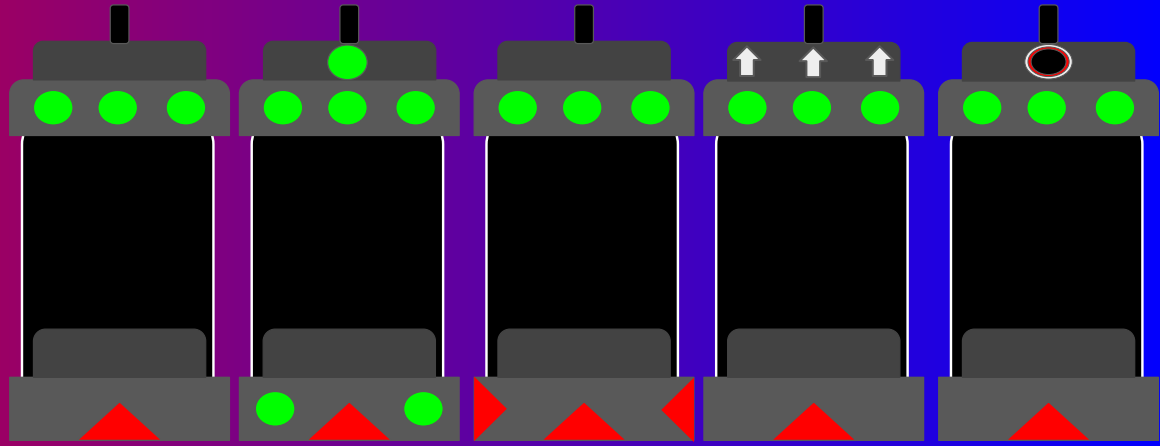

There will be a selection of about 24 floors to choose from. Four of these floors are floors for characters, being the ones most important to the game. Three of these floors will be for the shop characters, as challenges for people to try to beat, and get a reward for doing so. There will also be 2 lore floors to try and explain what happened in this place…

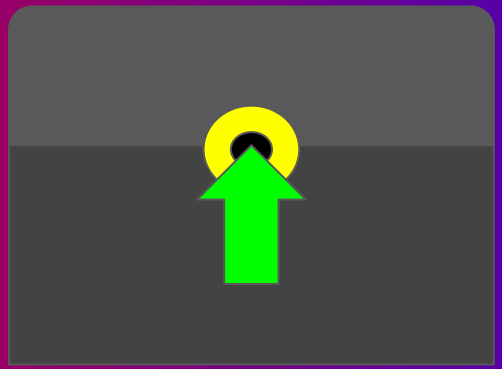

Map Choices	Floor Requirement of Map	Rarity
Library	0 (Can Always Spawn)	8%
Laboratory	0 (Can Always Spawn)	4%
Train Station	0 (Can Always Spawn)	6%
Kitchen	0 (Can Always Spawn)	10%
Warehouse	5 (Floor 5 or Later)	5%
Aquarium	0 (Can Always Spawn)	2%
Diner	0 (Can Always Spawn)	5%
Museum	0 (Can Always Spawn)	3%
Art Gallery	0 (Can Always Spawn)	5%
Rainbow Room	5 (Floor 5 or Later)	10%
School	0 (Can Always Spawn)	7%
Factory	10 (Floor 10 or Later)	4%
Gardens	5 (Floor 5 or Later)	5%
Playhouse	0 (Can Always Spawn)	4%
Gift Shop	0 (Can Always Spawn)	2%
CH1 Floor	15 (Floor 15 or Later	3%
CH2 Floor	15 (Floor 15 or Later	4%
Ch3 Floor	15 (Floor 15 or Later)	4%
Ch4 Floor	15 (Floor 15 or Later)	6%
CL1 Floor	20 (Floor 20 or Later)	0.5%
CL 2 Floor	20 (Floor 20 or Later	0.75%
CL3 Floor	20 (Floor 20 or Later)	0.75%
LR1 Floor	25 (Floor 25 or Later)	0.5%
LR2 Floor	30 (Floor 30 or Later)	0.5%

Odds at or after Floor 30. Odds Before Floor 30 Are Higher for Certain Maps.

Map Completions

You will need to complete certain tasks to complete a floor. Most floors require one task, fixing the machines on the floor. Other floors require other tasks, such as opening every storage container or everyone being spotted by all the corruptions, explained later. Panic mode starts after the tasks are completed. Machine types include regular, hard, treadmill, clicker, and search, and they are sorted.

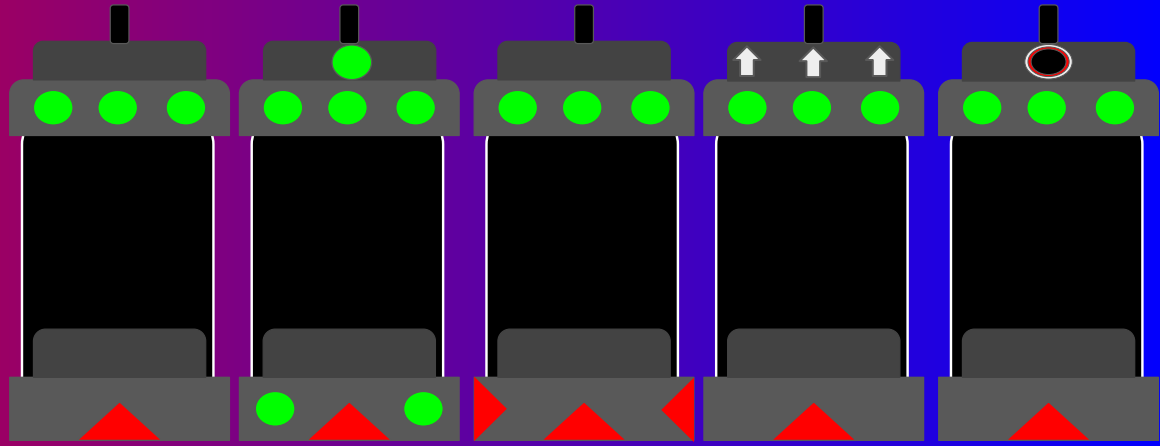

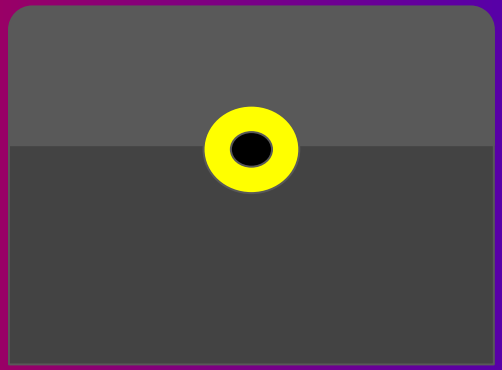

Map Tasks 1

You will need to complete certain tasks to complete a floor. Corruptions will spawn on the map, depending on the floor and amount of players in the run. So will machines, even if they are not required as the task. Storage containers will be hidden around the map. Complete a task and the bar at the top of the screen will slightly fill for every player inside of the run. After completion, run back to the elevator or death will come.

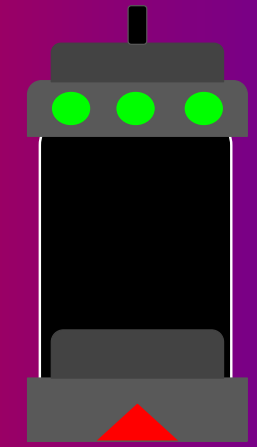

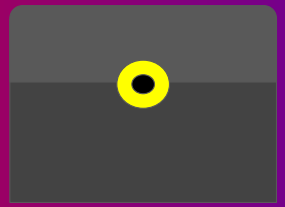

Sonium Achievings

Corruptions, machines, and storage containers will spawn even if they are not about the task. Machines give about 10 Sonium each, the games currency. You will get less of the Sonium if someone else did part of the machine. Getting spotted by any Corruption gives one or two Sonium, and opening storage containers gives about 5 Sonium to the person who had opened it. Sonium is used to purchase characters, skins, and decorations for player cards.
